

# A Bibliography Of Anomalies Of Fishes

## Supplement 1

C. E. DAWSON

The original bibliography (Gulf Res. Repts. 1(6), 1964) has, reportedly, been of considerable value to workers interested in the teratology of fishes and other vertebrates. The present supplement is the first of a proposed series which will attempt to include all new and pertinent publications as well as those which have previously been overlooked. The overall usefulness of the bibliography should be enhanced by its maintenance on a relatively current basis. Supplements will be issued irregularly and will normally include 75 to 100 new citations.

In the interest of continuity, the original format and subject index headings have been retained. Supplemental citations will be serially numbered and prefixed by the letter "S".

Acknowledgement is made to colleagues who have provided reprints of their publications and to those who have called my attention to omissions in the original bibliography.
